

📌 Project Summary

📌 Objective:

To explore and analyze a dataset of Netflix movies and TV shows for insights related to content trends, popularity, and more.

📌 Steps Performed:

1.

Imported libraries:

- pandas, numpy, matplotlib.pyplot, and seaborn for analysis and visualization.

2.

Loaded Dataset:

- Read the netflix_data.csv file using `pandas.read_csv()`.

3.

Initial Data Inspection:

- Used `.head()`, `.info()`, and `.describe()` to understand the structure and summary statistics.
- Checked for duplicate records (found **0 duplicates**).

4.

Data Cleaning & Transformation:

- Converted the `Release_Date` column from object to datetime, then extracted only the **year**.
- Dropped unnecessary columns like 'Poster_Url', 'Original_Language', and 'Overview'.

5.

Categorical Analysis:

- Created custom categories for the `Vote_Average` column:
-

Not Popular

- **Below Average**

- **Average**

- **Popular**

- Used `pd.cut()` to classify the values based on quartile distribution.

-
